Ways to track new releases

We're constantly making changes and introducing new features to improve our Google Workspace products. Here are several ways to keep up with what's new.

Read launch announcements

Use the Google Workspace Updates blog to stay on top of launches and learn essential information about new features and improvements to Google Workspace products. You can visit the blog any time. Or, you can subscribe to get updates by email or RSS feed:

1. Open the Google Workspace Updates blog.
2. To get a daily digest email when we publish one or more blog posts, enter your email address and click **Subscribe**.
3. To see the updates in your preferred RSS reader, click **Subscribe by feed**.

Learn about upcoming launches in the GCC

Get insights into upcoming launches in the Customer Connect forum within the Google Cloud Community (GCC). There, you can see our roadmap and preview upcoming launch announcements.

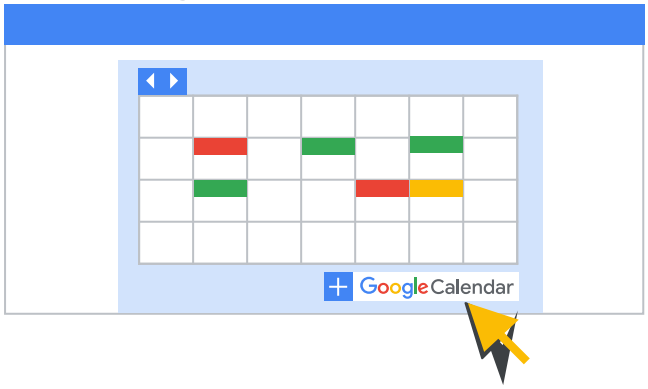
To access the Customer Connect forum, you must be allowlisted. Reach out to your Google account rep to get access.

See feature rollouts on the release calendar

Use the Google Workspace release calendar to see what features are rolling out and when they’re likely to reach your domain. You can visit the calendar online or add the release calendar to your

own Google Calendar:

1. Open the release calendar page.
2. Click **+ Google Calendar**.



3. Check the box next to the calendar you want to add, or click **Add all** to subscribe to all calendars.
4. The calendar appears on the left in your calendar, under **Other calendars**.

Review recent releases

See what's recently launched across Google Workspace in What's new in Google Workspace.

Sign up for email updates

You can subscribe to additional mailings for more information about product and feature announcements, tips and tricks, and other resources to make the most of Google Workspace.

1. Sign in to your Google Admin console.
   Sign in using an *administrator account*, not your current account chien10082002@gmail.com
2. In the Admin console, go to Menu ☰ > @ **Account** > **Account settings** > **Preferences**.
3. Check the boxes for the mailings that interest you.
4. Click **Save**.

- Choose when users get new features
- Turn on or off new services by default

What’s new in Google Workspace (recent releases)

The table is available in English, French, Japanese, Portuguese, and Spanish.

Learn about the new Google Workspace features and enhancements available to your users. The table is updated weekly and includes new features once they start rolling out to Scheduled Release domains. For more information about release tracks, go to Choose when users get new features.

To use the table:

1. Click the **Narrow by** filter to search by product.
2. To see the latest releases, click **Release week** to sort by date. The date indicates the Scheduled Release track.

Product	Description	Release week (YYYY-MM-DD)
Admin console	Email notifications from Google now available in the Alert Center. Learn more	2022-12-12

Upcoming Google Workspace releases

We are not adding any new releases (features) to this article but will provide updates when the listed features launch. To learn about the other ways you can track new and upcoming Google Workspace releases, go to Way to track new releases or contact your Google account representative. If you have feedback about changes to this page, complete this form.

Listed releases (features) are not guaranteed to become generally available and might be modified from their current form. Additionally, the list of upcoming releases is not an official commitment and is subject to change.

To see products and features that have already launched, visit What's new in Google Workspace.

Search the table

- Enter keywords to filter content.
- Click **Narrow by** and select a product to search by product.

The table is available in English, French, Japanese, Portuguese, and Spanish.

Product	Feature	Feature description	Status
Admin console	Carbon Footprint for Google Workspace	Carbon Footprint for Google Workspace reports the gross emissions of using Google Workspace, so that everyone can track the emissions impact of using tools such as Meet, Gmail, Docs, and more.	In development
Admin console	Role assignments for groups	You can assign roles to groups, such as a security group.	Launched. Learn more
Admin console	Bulk configuration of third-party applications	You can bulk configure third-party applications' app access control settings using CSV file uploads.	In development
Admin console	App badges for third-party OAuth applications	Make informed decisions about the use of third-party applications in the Admin console.	In development
Admin console	Attribute-based organizational unit placement	Using Directory Sync, you can map an external directory's attribute containing the organizational unit path to a Google user directory attribute and use the path to place the synced user into an org unit.	In beta
Admin console	CAA for APIs	Context Aware Access (CAA) allows you to restrict the usage of entire Google Workspace apps based on the user's context (IP address, OS, device status, and so on). This feature allows security admins to extend the same context-based controls to APIs. You can create allowlists to exempt trusted APIs from the controls.	In alpha
AppSheet	Email autocompletion	App users can start typing someone's email address and see a selection of their contacts. Support is limited to Google Workspace users.	In development
AppSheet	Google Directory integration	Allow AppSheet to programmatically pull data from Google Directory APIs. Powers features such as email autocomplete in the app editor and allows you to create apps that use their own directories as data sources.	In development

Product	Feature	Feature description	Status
Chat	Refreshing Chat's UI experience on the web	Refreshing the Google Chat existing web UI experience by introducing Material 3 Design styles.	Launched. Learn more
Classroom	Elevate data sync roster import from Student Information Systems (SIS)	(International) Enables you to create classes and add student rosters at scale. Available in beta to Japan, Canada, UK/Ireland, Italy, Sweden, Spain, Australia, Belgium, the Netherlands, and Luxembourg	In development
Classroom	Practice sets: Create interactive assignments with real-time feedback and autograding	Educators can turn teaching content into interactive, autograding assignments with practice sets. Students get real-time feedback, including visual explainers and video hints to help with concepts, and fun animations for correct answers. Saves time on manual grading, helps identify content that needs more in-class time, and supports independent learning.	Launched
Classroom	Grading categories for grade export	Teachers can include grading category information when exporting assignments to their student information system (SIS). Teachers don’t need to manually change the category directly in their SIS, which can be tedious and error prone.	Launched
Classroom	Improvements to notification experience	Updates to push and email notifications experience to make it easier to find the right information needed for students and teachers to take action in Classroom.	Launched
Contacts	Delegate access	You can use the Admin SDK API to update permissions on behalf of users within your domain.	In development
Contacts	Create & edit your contacts in Companion	Users can create and edit contacts directly in the Google Workspace side panel, rather than needing to open contacts.google.com in a new tab. Users can create a contact from scratch, from search terms, or edit an existing contact.	Launched. Learn more

Product	Feature	Feature description	Status
Directory Sync	Auto-refresh updated groups in the user sync scope of a Directory Sync configuration	If the names of any groups in the user sync scope of a Directory Sync configuration are changed in Active Directory, they’re automatically updated in the configuration. If those groups are deleted in Active Directory, their names are highlighted in red in the configuration.	In development
Directory Sync	Place synced users in a selected organizational unit	Directory Sync admins can place synced users in an existing organizational unit in Google Cloud directory, allowing you to manage policies based on organizational unit in Google Workspace or Chrome Enterprise. If the user is moved to other organizational units after a sync, you can enforce the mapping in the identity sync configuration and undo the movements in a subsequent sync.	In development
Directory Sync	Sync from up to 50 Active Directory forests or domains	You can set up a sync from up to 50 Active Directory forests or domains.	In development
Directory Sync	Cloud-based Directory Sync to bolster co-existence and seamless sync from Active Directory	Introducing an agentless solution for syncing with multiple Active Directory domains using Cloud VPN or Cloud InterConnect connection. You can sync users and groups in complex AD configurations, such as multiple AD forests.	In beta. Learn more
Directory Sync	Ensure seamless user sync from Active Directory groups based on validated GroupIDs	Users are synced from Active Directory groups based on their GroupIDs, rather than by names. Doing so ensures more seamless and reliable syncing, especially if user groups in Active Directory are renamed. Also, while defining the user scope for the sync, you can verify the group names and correct any typos.	In development
Directory Sync	Attribute-based organizational unit placement	Using Directory Sync, you can map an external directory's attribute containing the organizational unit path to a Google user directory attribute and use the path to place the synced user into an org unit.	In beta

Product	Feature	Feature description	Status
Docs	Select any color with eyedropper tool	Users can select any color using the new eyedropper tool in the color palette. Available in Docs, Sheets, Slides, and Forms.	Launched. Learn more
Docs	Expand and collapse content in Docs	Users can expand and collapse sections in their documents, making it possible to hide portions of documents for clarity.	Launched. Learn more
Docs	Full mouse support for Android app	Docs Android app users get full mouse support.	Launched
Docs	Support for recurring meeting and emailing meeting notes	Meeting notes, part of the Smart Canvas efforts, enables contextual actions in meeting notes. This update includes meeting notes for recurring meetings, and the ability to email meeting notes.	In development
Docs	Simplifying accessibility settings in Docs	We recently announced more customization for accessibility settings in Google Docs, Sheets, Slides, and Drawings. We're consolidating the Docs settings for screen reader and braille support into a single setting. With this change, assistive-technology users have an improved user experience with better support for screen reader settings and shortcuts.	Launched. Learn more
Docs	Add variables to easily reuse document structures	Docs users can add variables to help more easily reuse documents that are nearly identical in structure but have different recipients or circumstances. Doing so streamlines the creation of items, such as invoices, that are the same document structurally but with client dependent variations.	In development
Docs	Custom building blocks in Docs	With the new Smart canvas feature in Docs, users can save content in a Doc as custom building blocks which can be reused in other Docs. These building blocks can capture custom email drafts, meeting note templates, pitches, product descriptions, and more.	Launched. Learn more

Product	Feature	Feature description	Status
Docs	Convert links to external apps to smart chips	Google Workspace Add-ons partners can enable Docs users to convert a link to their external app into a smart chip. The user can choose to create a smart chip when they paste a compatible link into a Doc. Once created, users can point to the chip to see additional information using rich previews.	Launched. Learn more
Docs	Add a stopwatch chip in Docs	Users can insert a stopwatch chip into Docs. Once inserted, users can start, stop, and reset the stopwatch.	Launched. Learn more
Docs	Add emoji reactions to existing comments in Docs	Users can add emoji reactions to existing comments in Google Docs.	Launched. Learn more
Docs	Drive spam view	Drive users who receive spammy or abusive content have a dedicated location within Drive for hosting unwanted shares, which unsubscribes the user and prevents further notifications. Automatic classifiers redirect files that Drive strongly suspects to be unwanted to spam, and Drive users can manually move files in and out of spam. If a file resides spam for over 30 days, it is permanently removed.	Launched. Learn more
Docs	Formatting sidebar on Docs, Sheets, and Slides on Android	Users can access a new formatting sidebar, optimized for Android tablets.	In development
Docs	eSignature for Docs	Introducing eSignatures for Google Docs. This new capability enables users to electronically request and add legally binding signatures from within Docs.	In development
Docs	Table of contents improvements in Docs	Google Docs users have more options for the content, heading levels, and formatting that are displayed in a document’s table of contents.	Launched. Learn more

Product	Feature	Feature description	Status
Drive	IRM for Drive DLP	Enable IRM (Information Rights Management, also called Disable Copy, Download, and Print) enforcement as a data loss prevention (DLP) remediation action for Drive files. Enables you to enforce IRM settings on all documents that match DLP policies.	In development
Drive	Create more flexible sharing boundaries with Drive trust rules	Allows you to have more flexible and granular sharing policies to control both internal and external sharing. For example, ensure that engineers in your organization can't share outside their department. Or, share only with a specific organizational unit or group share with external users.	In beta. Learn more
Drive	Use filter chips in Drive on the web	Making it easier for users to filter and narrow down the files they're looking for using similar tools to search. The filter chips appear across folders, My Drive, and recent and starred views.	In development
Drive	Find files more easily with the Drive Android file picker	The Drive file picker screen is shown when a user needs to choose a file or folder in the Drive Android app. For example, if a user wants to insert a Drive file into an email or move a file from one folder to another. We're making it simpler to find recently-viewed Drive items and see what other storage locations are available.	Launched. Learn more
Drive	Free-hand annotation support in the Drive Android file preview screen	We're adding the ability to use a finger or a stylus to freely write annotations on a file shown in the Drive Android file preview screen. The annotations can be saved to the file if it's a PDF, or an annotated PDF copy of the file can be made.	In development
Drive	Improving drag & drop support for the Drive Android app	Users are able to drag and drop between 2 instances of the Drive Android app that are open side-by-side on their device (when both instances are logged into the same account).	Launched

Product	Feature	Feature description	Status
Drive	Optimizing the Drive Android app for foldable mobile device positions	With the increase in availability of foldable mobile devices, we want to make sure Drive is taking advantage of the unique capabilities of foldables. Drive will intelligently respond to what position the foldable device is in and show the most helpful format for that position.	Launched. Learn more
Drive	Optimizing the Drive Android app for tablet displays	We’re improving the Drive mobile experience on Android tablets. Introducing changes and fixes to make sure the Drive app takes full advantage of the additional screen space that tablets provide.	Launched. Learn more
Drive	Use separate instances of the Drive Android app to manage multiple accounts	Introducing Drive multi-account support. A user can have 2 instances of the Drive mobile app running side-by-side on a single device and each instance showing the content of a different Google Account. The 2 instances can be acted on independently. A user can preview a file in one instance of the app while navigating through their folder hierarchy in the other instance.	Launched. Learn more
Drive	Set access expiration & provide temporary access to files on Android	Users of Drive on Android can set an expiration date when they share the file, and provide temporary editor access to files in My Drive. Doing so makes it easier for users to control access appropriately.	In development
Drive	Drive spam view	Drive users who receive spammy or abusive content have a dedicated location within Drive for hosting unwanted shares, which unsubscribes the user and prevents further notifications. Automatic classifiers redirect files that Drive strongly suspects to be unwanted to spam, and Drive users can manually move files in and out of spam. If a file resides spam for over 30 days, it is permanently removed.	Launched. Learn more

Product	Feature	Feature description	Status
Drive	Manage folder sharing permissions of content managers in shared drives	Admins and shared drive managers can turn on or off the ability for content managers in shared drives to share folders. This feature helps better manage access to data.	Launched. Learn more
Drive	Streamlined file organization with the new Drive location picker	Updating the location picker in Drive (web only) which is used whenever users move or add shortcuts to items. The new experience includes a modern UI and intelligent suggestions.	Launched. Learn more
Drive	Drive iOS Google Workspace search history informational banner	Shows an informational banner in the search results on the Drive iOS page to inform users when Google Workspace search history is turned on. The banner also has a link to the search history setting on the web.	In development
Drive	Drive Android external input device support improvements	Adding additional keyboard shortcuts and improved mouse support for external input devices connected to an Android tablet.	In development
Drive	Improvements to requesting and granting access in Drive	Improvements to the way users request and grant access to files. Users can specify whether they want view, comment, or edit access to a file. They can decline an access request silently or they can notify the requester. Users are notified about pending access requests using a blue dot on the "Share" button, access requests can be granted or declined in the sharing dialog.	In development
Forms	Select any color with eyedropper tool	Users can select any color using the new eyedropper tool in the color palette. Available in Docs, Sheets, Slides, and Forms.	Launched. Learn more
Gmail	View best search results first	Gmail users can now see the top search results based on the best matches to their search query in reverse chronological order. Find what you’re looking for at the top of the list.	Launched. Learn more

Product	Feature	Feature description	Status
Gmail	Mail merge with Gmail & Sheets	Gmail users can personalize emails either with built-in mail merge tags (like @firstname and @lastname) or by linking to a Google Sheet containing recipient information and custom merge tags. When you send the email, Gmail replaces merge tags with the appropriate information so each recipient gets a unique message.	In development
Identity	Role assignments for groups	You can assign roles to groups, such as a security group.	Launched. Learn more
Identity	Attribute-based organizational unit placement	Using Directory Sync, you can map an external directory's attribute containing the organizational unit path to a Google user directory attribute and use the path to place the synced user into an org unit.	In beta
Meet	Add custom meeting backgrounds for your organization	You can upload a set of default image backgrounds for use in Meet's background replace feature.	In development
Meet	Meet performance improvements	Improving the performance of Meet in Chrome across the board to reduce power requirements on Chrome OS, MacOS, and Windows. Enabling support for larger meetings and lower-powered end devices.	In development
Meet	Google Meet Live Sharing Android SDK	Allows users to share live app content with each other through the power of Google Meet. Developers can integrate with this SDK to enable the functionality on Android.	In development
Meet	Instant Self Check in Green Room–Web	Users in Google Meet who are using the green room can instantly check what peripherals are available and connected. If there’s a problem, they’ll be able to see it before they join and easily switch to other peripherals.	Launched. Learn more
Meet	Mirror mode	Extends the display of Desk 27 and Board 65 onto an external HDMI device.	In development

Product	Feature	Feature description	Status
Meet	Improved image quality in poor lighting	Meet users get improved image quality in poor lighting conditions through the use of machine learning.	In development
Meet	Noise removal for phone participants	Meeting participants who join by phone have background noise removed from their audio. The update makes it easier to hear and understand phone participants. It also removes disturbing or unwanted sounds from the meeting.	In development
Meet	Meet client-side encryption support for mobile devices	Google Meet mobile participants can join meetings that are created with Google Workspace client-side encryption (CSE) turned on.	In development
Meet	Paired participant tiles in Meet	Users can send and accept requests to pair tiles in Google Meet. When set up, users' tiles are locked to each other. This feature could be used, for example, by an interpreter and a participant using sign language, so that the audience in a call would view the 2 tiles together.	In development
Meet	Hand raise gesture detection	Users can activate the hand raise feature in Meet by directly raising their own hand during a call. When enabled, users no longer have to select this option in the Meet UI, making interactions feel more natural.	In development
Meet hardware	Mirror mode	Extends display of Desk 27 and Board 65 to an external HDMI device	In development
Meet hardware	Avocor Board 65	Designed to bring teams together for more efficient, equitable, and intuitive collaboration, the Google Meet Series One Board 65 by Avocor provides meeting equity for teams that are in-person and remote.	Launched

Product	Feature	Feature description	Status
Security	IRM for Drive DLP	Enable IRM (Information Rights Management, also called Disable Copy, Download, and Print) enforcement as a data loss prevention (DLP) remediation action for Drive files. Enables you to enforce IRM settings on all documents that match DLP policies.	In beta
Security	Create more flexible sharing boundaries with Drive trust rules	Allows you to have more flexible and granular sharing policies to control both internal and external sharing. For example, ensure that engineers in your organization can't share outside their department. Or, share only with a specific organizational unit or group share with external users.	In beta. Learn more
Security	Control third-party app access by organizational unit using AAC	Block third-party applications accessing Google Workspace data at a domain level using Application Access Control (AAC). The feature provides you with more granular controls enabling blocking application access at an organizational unit level.	In development
Security	Drive spam view	Drive users who receive spammy or abusive content have a dedicated location within Drive for hosting unwanted shares, which unsubscribes the user and prevents further notifications. Automatic classifiers redirect files that Drive strongly suspects to be unwanted to spam, and Drive users can manually move files in and out of spam. If a file resides spam for over 30 days, it is permanently removed.	Launched. Learn more
Security	CAA for APIs	Context Aware Access (CAA) allows you to restrict the usage of entire Google Workspace apps based on the user's context (IP address, OS, device status, and so on). This feature allows security admins to extend the same context-based controls to APIs. You can create allowlists to exempt trusted APIs from the controls.	In alpha

Product	Feature	Feature description	Status
Security	Context-Aware Access (CAA) monitor mode	Enables security admins to deploy CAA access levels in monitor mode, providing details about the number of users blocked if the setting was applied in active mode. It won't block end users but captures the potential blocks the access levels will have. Admins can fully understand the end user impact of the access levels before deploying it in active mode	In development
Sheets	Explore Looker data using Connected Sheets	Interactively explore data from LookML models through the familiar Sheets interface, using Connected Sheets. Users have access to governed data from 50+ databases supported by Looker. Exploration is intuitive, and views, fields, and measures present the same Looker. Use Looker data through Connected Sheets in PivotTables, charts, formulas, and more.	Launched
Sheets	Sheets link preview	Users can see Drive and public link previews in the Sheets app on Android. Users can now make more informed decisions when clicking a link. This feature is already available for the web.	In development
Sheets	Select any color with eyedropper tool	Users can select any color using the new eyedropper tool in the color palette. Available in Docs, Sheets, Slides, and Forms.	Launched. Learn more
Sheets	Enhanced drag & drop options in the Sheets Android app	Sheets users on Android have more drag & drop options with the ability to drag, copy, and share charts and images.	Launched
Sheets	Drag content from Slides into other apps on Android	Android users are able to easily drag text and image content from Slides into other apps.	Launched
Sheets	Formatting sidebar on Docs, Sheets, and Slides on Android	Users can access a new formatting sidebar, optimized for Android tablets.	In development

Product	Feature	Feature description	Status
Sheets	Expanded date capabilities in Sheets	Sheets users can now insert dates more easily using the @ entry point in Sheets. For example, they can use @today, @yesterday, @tomorrow, and @date (which opens the date picker).	Launched. Learn more
Sheets	Automated actions within Sheets	With Automated actions, users can streamline their workflows by triggering email notification with no code. Sheets users can save time and ensure collaborators are aware of important updates without having to perform manual tasks.	In development
Sheets	Enhancing filters in Sheets	After applying a filter, Sheets users can see a basic summary on the number of rows that are filtered in the bottom right margin. Additionally, they can right-click and include filters on the context menu and can filter by value.	Launched. Learn more
Sheets	Place chips in Sheets	Sheets users have new smart chips to directly add Google Maps data into their spreadsheet cells. By entering @, users can search for places, addresses, and locations and insert the information as chips with actionable hover cards. Sheets users can also convert Maps links to chips or paste them from Docs.	Launched. Learn more
Sheets	Converting to chip using a tab in Sheets	Users get a suggestion so they can more easily convert email addresses, Drive and Calendar links into smart chips using the tab key. This feature is currently supported in Docs.	In development
Sheets	Optimized zoom scale in Sheets on Android	Users get an improved zoom scale experience when using Sheets on an Android device.	Launched. Learn more
Sheets	Extracting data from smart chips in Sheets	Users can extract data from smart chips with new function syntax. For example, using a list of colleagues from your domain, reference a cell with a people chip and indicate the attribute you'd like to extract in a cell.	Launched. Learn more

Product	Feature	Feature description	Status
Sheets	YouTube chip in Sheets	Sheets users have new smart chips to directly add YouTube data into their spreadsheet cells. After pasting a YouTube link, users can convert to a chip from the hover card. Sheets users can also paste YouTube chips from Docs.	Launched. Learn more
Sheets	Mail merge with Gmail & Sheets	Gmail users can personalize emails either with built-in mail merge tags (like @firstname and @lastname) or by linking to a Google Sheet containing recipient information and custom merge tags. When you send the email, Gmail replaces merge tags with the appropriate information so each recipient gets a unique message.	In development
Sheets	Mouse support within Sheets & Slides on Android	Users can use a mouse when using Sheets on Android tablets.	Launched. Learn more
Slides	Present Slides from Meet	Presenters can see their content, controls, and audience in one place while presenting with Slides in Meet. After initiating a presenting session from the new Meet menu in Slides, a user can control that presentation directly from within the Meet tab. Users can also present Slides directly from a Meet call, and control their presentation from the Meet tab.	Launched
Slides	Select any color with eyedropper tool	Users can select any color using the new eyedropper tool in the color palette. Available in Docs, Sheets, Slides, and Forms.	Launched. Learn more
Slides	Formatting sidebar on Docs, Sheets, and Slides on Android	Users can access a new formatting sidebar, optimized for Android tablets.	In development
Slides	Mouse support within Sheets & Slides on Android	Users can use a mouse when using Sheets on Android tablets.	Launched. Learn more
